

# SU Baresi

## Hybrid Rye

**Outstanding Forage Yield Potential**  
**Full Market Potential**  
**Excellent Fit for Livestock Systems and**  
**Changing Seasons**

### Don't give up anything. A forage driven rye with flexibility and a real grain up-side.

SU Baresi is an exciting, forage-first, hybrid rye that delivers exceptional biomass production and aggressive early growth for high-quality forage systems. Developed with livestock and mixed farming operations in mind, it offers outstanding fall and spring vigour, strong winter hardiness, and excellent standability to support reliable performance across diverse growing conditions. This is the only forage targeted Hybrid Rye that has the support to enter any grain market.

- Strong grain yield if taken to maturity with management
- Earlier maturing, shorter height, strong standing
- Superior Yield regionally in AB

### Strengths

Ability to perform beyond forage use alone. While other forage varieties are strictly forage-focused, this variety is built first for forage production, but it still delivers strong grain yield if growers choose to take the crop to harvest, providing added flexibility and value without the typical trade-offs seen in forage-only products.

Maturity:	-2 Days vs. Hazlet
Height:	-8 cm vs. Hazlet
Lodging resistance:	Good (2.5)
